### REC\_DS using C\_Week 1\_COD\_Question 6

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

John is tasked with creating a program to manage student roll numbers using a singly linked list.

Write a program for John that accepts students' roll numbers, inserts them at the end of the linked list, and displays the numbers.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of students.

The second line consists of N space-separated integers, representing the roll numbers of students.

##### ***Output Format***

The output prints the space-separated integers singly linked list, after inserting the roll numbers of students at the end.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

23 85 47 62 31

Output: 23 85 47 62 31

### **Answer**

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>
struct node{
    int roll;
    struct node*next;
};
int main()
{
    int n;
    scanf("%d",&n);
    struct node*head=NULL;
    struct node*temp=NULL;
    struct node*tail=NULL;
    for(int i=0;i<n;i++)
    {
        struct node* newnode=(struct node*)malloc(sizeof(struct node));
        scanf("%d",&newnode->roll);
        newnode->next=NULL;
        if(head==NULL)
        {
            head=newnode;
            tail=newnode;
        }
        else{
            tail->next=newnode;
            tail=newnode;
        }
    }
}
```

```
}
temp=head;
while(temp!=NULL)
{
    printf("%d",temp->roll);
    if(temp->next!=NULL)
    {
        printf(" ");
    }
    temp=temp->next;
}
while(head!=NULL)
{
    temp=head;
    head=head->next;
    free(temp);
}
return 0;
}
```

**Status :** Correct

**Marks : 10/10**
